

ENVIRONMENTAL CHAMBER FOR HUMIDITY CONTROL PROGRAMMABLE AIR PRESSURE MEMORY STORAGE FOR UP TO 100 PROGRAMS WRITE PROTECTION AND DATE STAMP FOR EACH PROGRAM TWO SYMMETRICAL PIPETTES WITH EACH PULL TWO COOLING MODES: TIME AND DELAY PRE-PROGRAMMED SAMPLE PROGRAMS FOR INTRACELLULAR AND PATCH PIPETTES. SPECIAL PROGRAMMING ON REQUEST RAMP TEST TO ESTABLISH PROGRAM HEAT SETTINGS WHEN A NEW FILAMENT OR GLASS IS INTRODUCED VACUUM FLUORESCENT DISPLAY

CONSTANT CURRENT POWER SUPPLY FOR FILAMENT AND PULL SOLENOID

P-97 FLAMING/BROWN[™] MICROPIPETTE PULLER

The **P-97** Flaming/Brown[™] type micropipette puller is ideal for fabricating micropipettes, patch pipettes and microinjection needles. While retaining many of the features of earlier models, the **P-97** offers improvements in mechanical, electronic and software design. The result is better control of the pulling process and a higher degree of reproducibility. The **P-97** combines a proven mechanical system with a sophisticated, programmable microprocessor controller. This programmable control of the pulling parameters allows the investigator to design application specific pipettes from a wide range of glass compositions and sizes.

A number of other features have been incorporated in the design of the **P-97**. Most apparent is the environmental chamber which surrounds the heating filament. This environmental chamber is designed to minimize the effect of changing humidity on the reproducibility of pulled pipettes. A 25% increase in power over previous versions allows for the use of larger heating filaments, larger diameter glass and multi-barrel glass. The metal jaws that clamp the heating filament have also been redesigned to minimize heat retention. There are two modes of cooling:time and delay. The delay mode provides extended cooling for large diameter and multibarrel glass. A spring-loaded clamping mechanism has been added for easier loading of glass. A vacuum fluorescent display has been added that allows easy viewing.

Software improvements on the **P-97** include a display of the total heat-on time to assist in program development and troubleshooting. Up to 100 programs can now be written and stored in memory, which makes the **P-97** suitable for multiple users. These programs can now be writeprotected, adding security to prevent programs from being changed or altered inadvertently. The display shows the last date and time the program was written or edited. In addition, the air pressure is a programmable parameter.

P-97

Flaming/Brown type micropipette puller, glass stop, manual, and hard copy of Sutter Pipette Cookbook

Each puller comes with a FB255B filament and a sample box of BF150-110-10, BF100-50-10, and BF150-86-10 glass. Sutter pre-programs the P-97 with a 2.5mm box filament unless an alternative filament is requested.

P-1000

SUTTER INSTRUMENT P-1000 / P-97 COMPARISON

		Two identical pipettes with the same taper length and same tip size. For longer or shorter tapers, contact Sutter Technical Support. To make overall length identical, please purchase and install the optional Glass Stop (part # GS) onto your puller bar. 4–5 loops is ideal for thick walled glass, while 2–3 loops is ideal for thin walled glass. The P-1000 has an additional feature "Line Repeat" (see below). This chamber is purged with dry air before and after the pull to remove humidity and control for the ambient conditions in the lab. Ideal for labs with multiple users. Delay mode is recommended when making patch pipettes with thick walled glass. On the P-1000, the PROGRAM LOCK feature is on the Menu Screen of the program. The SAFE HEAT mode helps prevent filament burn-out. The PIPETTE COOKBOOK can be used to search for a program that is appropriate for the filament installed in your puller, the glass dimension you are using,

Pre-heat Mode Yes No		The color TOUCH SCREEN DISPLAY porvides an intuitive interface that allows more information to be displayed.
	-	The JAW TEMPERATURE SENSOR helps define ideal pulling conditions.
Copy & Paste Function Yes No	I	The ThermoLock [™] technology in the PRE-HEAT mode assures that the jaws have reached a specific temperature before the glass is pulled. This can increase the stabilility of the program from pull to pull.
	-	The COPY & PASTE feature simplifies writing and editing a program.
Line Repeat Yes No	-	The LINE REPEAT feature simplifies writing multi-line programs.
Ramp Test Specific to Each Program Yes No	-	The RAMP TEST VALUE is linked and specific to each program.
Diagnostics Yes No		The DIAGNOSTIC feature can be used to check the Heat, Pull, Velocity Sensor, and Air/Cooling System functions of the puller.
Error Messages & Warnings Yes No		The P-1000 will alert the user if a system error occurs when pulling a pipette (filament burn-out, air leak, failed to melt glass, etc).
Pull Results Yes No		The PULL RESULTS feature displays the heat-on times line by line for the last two pulls.
Glossary Yes No
